Experiment - 4

- A topology was configured with 4 pc's, 2 switches & 3 routers

- Ip addresses to each interface was set

- static IP routing was done to Router 1 in between

- The other 2 routers were set with default ip routing, like #route 0.0.0.0. 0.0.0.0 20.0.0.2

- The default ip routing is the route taken by packet when no ip route is set

- A ping was made from PC0 to PC4, to ensure that the network in topology was working as expected. And recieved on appropriate ping successful message from command prompt.
